

Aiprosol website review

Prepared by Arora · 2026-05-09 · scope: live domain, Wix V2 site, Next.js V3 build at /web/

Reviewed	Live domain (aiprosol.com), local Next.js V3 build (28 routes), all main pages walked and screenshotted at 1440 × 900.
Headline	The V3 build is high-craft and structurally complete. The single most damaging issue is that aiprosol.com still resolves to a GoDaddy parking page saying "LIVE BY 15th April" — that is what every prospect Googling Aiprosol currently sees.
Findings	1 critical · 4 high-impact · 3 claim-substantiation · 4 UX/structural · 3 polish.

CRITICAL

Public-facing crisis ·
fix today

HIGH

Visible credibility leak

MED

UX or polish

Most urgent · do today

CRITICAL

1. Domain is parked on GoDaddy

aiprosol.com currently resolves to a GoDaddy under-construction page with "LIVE BY 15th April" — about a month stale. Anyone searching for Aiprosol sees this. The Next.js V3 build is locally complete but never deployed; the Wix V2 site never had the domain pointed at it either.

Fix: deploy the V3 build to Vercel and point the apex + www at it, or put up a single styled *Coming soon · join the list* page. Anything is better than the GoDaddy default.

High-impact fixes · visible credibility leaks

HIGH

2. Number inconsistency: 6 vs 7 industries

The bento grid hard-codes *"The numbers, across 6 industries"*, but the stats banner and the persistent status orb both say 7 — and `case-studies.json` actually contains 7 cases across 7 unique industries. Bento line is stale.

Files: `web/src/components/BentoGrid.tsx:44` · `web/src/components/home/StatsBanner.tsx:9` · `web/src/components/StatusOrb.tsx:26`

HIGH

3. Cycling headline reads broken for ~350 ms

When the cycling word fully erases, the hero headline reads “Automate the |. Scale the important.” — a half-sentence with a floating period.

Fix: never let the variable word reach empty — pause on the full word, then swap directly to the next, or keep one phrase visible at all times. Constant lives in `PAUSE_AT_EMPTY = 350`.

File: `web/src/components/CyclingHeadline.tsx:14`

HIGH

4. Product and blog cover art look placeholder

Every one of the 19 product cards and 6 blog posts uses the same template: black tile, “Aiprosol” wordmark, single emoji/icon. It reads as AI-generated mockups, which actively undermines the “real, working products” claim.

Fix: 19 real product covers is the single highest-leverage visual upgrade. Even a varied palette per category would help.

HIGH

5. No social proof above the fold

Hero is beautiful but has zero client logos, zero quoted testimonial, zero “as featured in”. The testimonials section only appears 7+ scrolls down.

Fix: a logo strip immediately under the CTAs would do real work — even four logos beats none. If real client logos aren’t signable yet, lead with the strongest case-study metric as a quote bar.

Claims that need substantiation

HIGH

6. “340% Avg ROI” and “35+ Hrs/Wk Saved” — no source

Repeated 4× across the homepage with no footnote, no “based on N engagements”, no methodology link. Given current revenue state, these read as aspirational.

Fix: either asterisk them with “based on Stage 1 audit projections, N=...”, or scale to ranges (“200–400% projected ROI”).

MED

7. “LIVE · 42,383 automations running globally”

If real, label the time window (“since launch”). If a vanity counter, anyone refreshing will spot it — that becomes a trust hit. Decide now before traffic arrives.

MED

8. “Money-back if we miss” has no terms

Strong guarantee in Hero Phase 2, but no link, no detail, no terms. Either link to the spec page or soften the wording.

UX and structural

MED

9. Hero is 280 vh — three full screens before workflow visualizer

Scroll-jacked 3-phase hero is high-craft, but on mobile and impatient B2B visitors this *will* cause bounces. Consider 200 vh max, or add a *Skip to content* ↓ affordance for keyboard and touch.

MED

10. Pricing page shows a stand-alone “£49,000” without context

Likely the annual savings figure from the slider, but it is not labelled clearly enough — a first-time visitor will read it as a price.

MED

11. Pricing CTAs go straight to /checkout?plan=...

No consult interstitial for £997 or £2,997 managed plans. That is a big single-click commitment for a B2B service. Add a *Talk to us first* secondary CTA, or a 15-min discovery call gate.

MED

12. All 6 blog posts attributed to “Arora”

Consistent with the brand (the AI CEO writes the field notes), but reads as one-author. If any guest contributors or human co-authors exist, surface them — even one breaks the monotone.

Smaller polish

MED

13. Persistent StatusOrb in the bottom-left

“Computing ROI / Reading proof / Catalogue ready” follows the user on every page. Novel, but borderline debug-looking. Confirm intentional, otherwise it’s clutter.

MED

14. Footer microcopy repeats the hero verbatim

“Automate the boring. Scale the important.” appears in both places. Fine, but a separate line in the footer would feel less echoey.

MED

15. Counts line up across the site

11 services / 19 products / 7 cases / 6 blog / 21 FAQs are all consistent across nav, page counts, stat banners, and JSON content seeds. That is where most sites drift first — yours doesn’t. Keep it that way once the bento line is fixed.

What is already working

- Three.js sphere and the scroll-jacked 3-phase hero is genuinely high-craft.
- GBP throughout — no USD slipped in anywhere.
- Hard-numbers case studies (78%↓, 6hr→3min, 4.1%→0.6%) are the strongest section by far.
- Workflow visualizer and the synthetic “Arora at work” demo are real differentiators.
- Footer information architecture is clean.

- All 28 routes return HTTP 200 · zero client-side console errors.
- Stripe + Resend + Vercel KV are wired in — checkout is technically ready (see web/LAUNCH-V3.md).

Recommended next 24 hours

1. Deploy the V3 build to Vercel and point aiprosol.com at it (or stand up a holding page) — closes the parking-page leak.
2. Edit one line in BentoGrid.tsx: 6 → 7 industries.
3. Tweak CyclingHeadline so it never empties — eliminates the broken-headline flash.

Three changes, <30 min of work, materially closes the credibility gap.
