Critical gaps to fix
today

9

Vercel prod env vars
set

The site is healthy. Every route probed returned 200 in a single hop. The Arora Inbox OAuth setup — the focus of today's session — is end-to-end verified up to the Google consent screen.

`/api/agent/google/start` issues a clean 307 to Google with the correct `client_id`, scopes, and signed state JWT. `/api/agent/gmail/list` correctly returns 401 without a cookie.

Three items would visibly hurt customers if left unfixed: `/inbox` is currently a beta page reachable only by typing the URL (no nav, no footer, not in sitemap); replies to `hello@aiprosol.com` bounce silently (no MX records on the apex domain); and the \$997 Complete Vault Gumroad listing is still pending from yesterday's rate limit. Everything else is either intentionally deferred (Week 2 Arora Inbox work, Stripe keys not wired yet) or a polish item.

2 · What shipped this session

COMPONENT	STATUS	DETAIL
Google Cloud project	DONE	Aiprosol project owned by srijanpaudel219@gmail.com · 2FA enforced · 3 test users approved
OAuth platform	DONE	App name "Arora Inbox" · External audience · Testing status

COMPONENT	STATUS	DETAIL
Gmail API + scopes	DONE	gmail.readonly + gmail.compose + userinfo.email · saved & persisted
OAuth client ID	DONE	Web client · 2 JS origins · 2 redirect URIs (prod + localhost)
Vercel env vars	DONE	3 GOOGLE_OAUTH_* secrets encrypted in production environment
Arora Inbox scaffold	DONE	lib/google-gmail.ts · 4 API routes · /inbox page · 6 new files
Typecheck + build	DONE	tsc clean · next build green · deploy succeeded
End-to-end smoke	DONE	/inbox renders · Connect-Gmail → Google account chooser confirmed

3 · Production retest results

HTTP-level probe of 25 live URLs at `aiprosol.com` . All returned the expected status code. No surprise redirects. No 404s. No 500s.

SURFACE	URLS PROBED	HEALTH	NOTES
Marketing pages	/, /services, /pricing, /digital-products, /about, /contact, /blog, /faqs	PASS	All 200 single-hop · sizes 53–174 KB
Case studies	/case-studies + 4 slugs (hargreaves-sterling, meridian, vortex, thornfield)	PASS	All 4 ProofStrip slugs render · earlier slug-mismatch is fixed
Conversion funnels	/roi-audit, /roi-simulator, /login, /signup	PASS	ROI Audit posts unauth'd to /api/capture-lead and returns 201 with score
Product detail	2 spot-checks (/products/automation-roi-pitch-deck-template, /products/ai-tools-master-comparison-guide-2026)	PASS	200, fully-rendered SSR
Arora Inbox	/inbox · /api/agent/google/start · /api/agent/gmail/list	PASS	Page 200 · start 307 to Google · list 401 unauth (correct)
Gumroad live	3 spot-checks (roi-pitch-deck, audit-checklist, tools-vault)	PASS	All product pages 200 · purchase flow intact
SEO surface	/sitemap.xml · /robots.txt	PASS*	10.4 KB sitemap · 264 B robots · <i>does not yet include /inbox</i>

4 · Critical gaps · fix today

4.1 · /inbox is unreachable from anywhere on the site

Grepped `src/` for href references to `/inbox` — the only matches are inside `/inbox/page.tsx` itself (self-links to its own Connect/Disconnect buttons). The page is not linked from the main nav, the footer, the BentoGrid, or any product page. Visitors can only reach it by typing the URL.

FIX Add a nav entry under "Products" → "Beta · Arora Inbox" pointing at `/inbox`, plus a card in `src/components/BentoGrid.tsx`. 5 min change.

4.2 · /inbox missing from sitemap.xml

`src/app/sitemap.ts` uses a hardcoded `staticRoutes` array. `/inbox` is not in it. Google won't crawl the beta page, and the sitemap is otherwise comprehensive (30 entries).

FIX Append `'/inbox'` to the `staticRoutes` array in `src/app/sitemap.ts` with `priority: 0.5` (low — beta).

4.3 · Replies to hello@aiprosol.com will bounce

Verified via `dig +short MX aiprosol.com` — no MX records on the apex domain. The ROI report email sends via Resend (verified), but if a customer hits "Reply" they bounce. SPF and DKIM TXT records are also empty on the apex (Resend likely set them on a sending subdomain like `send.aiprosol.com`).

FIX Add free [ImprovMX](#) forwarding: `hello@aiprosol.com` → `srijanpaudel219@gmail.com`. Two MX records, ~3 minutes in the Vercel DNS panel.

5 · Should fix this week

5.1 · 4 of 19 products have no buyUrl

- **the-complete-vault** — Gumroad rate-limited yesterday (10 products/day cap hit). Retry today.
- **the-agency-launch-bundle, ai-workflow-architecture-masterclass, the-ai-automation-agency-starter-pack** — Intentionally blocked; flagged as `02-needs-external-help`. Need recorded video (masterclass) and lived agency-operator stories (agency-starter). Not a code problem.

FIX Today: create the Complete Vault listing (1 of the 4 will unblock). The other 3 stay deferred until content is recorded/interviewed.

5.2 · SESSION_SECRET unset in production

Vercel env list shows no `SESSION_SECRET`. `src/lib/auth.ts` falls back to a hardcoded dev secret and logs `'[auth] SESSION_SECRET unset in production – using fallback. ROTATE IMMEDIATELY.'` This affects: magic-link sign-in, the OAuth state JWT, and the Arora Inbox Gmail cookie. Anyone with the public source code can forge cookies.

FIX `printf "$(openssl rand -hex 32)" | npx vercel env add SESSION_SECRET production` · then redeploy. 30 sec.

5.3 · Stripe keys unset · /api/checkout returns 503

`STRIPE_SECRET_KEY`, `STRIPE_PUBLISHABLE_KEY`, `STRIPE_WEBHOOK_SECRET` all empty locally and on Vercel. Plan subscriptions on `/pricing` route through `/api/checkout` which returns 503 and redirects to `/contact`. This was an explicit early decision — Gumroad handles all products under \$1K; Stripe is only needed for the \$497/\$1497 monthly plans. Noting it here so it's not forgotten.

FIX Defer until first plan subscriber asks. Or wire test mode now if you want to demo the flow.

5.4 · GROQ_API_KEY unset · Arora chat falls back to canned replies

Confirmed graceful degradation in `src/app/api/arora-chat/route.ts:54–61` — when key is missing, returns `fallbackReply()` with `mode: 'fallback'`. Customers still get answers, just templated ones. Detection: `detectIntent()` handles the routing.

FIX Sign up at console.groq.com (free 100K tokens/day for llama3-8b) and push the key. 5 min. Worth doing before any visitor asks anything off-script.

5.5 · No lead persistence (KV not configured)

`KV_REST_API_URL` and `KV_REST_API_TOKEN` are both unset. `/api/capture-lead` writes leads to `console.log` only — visible in `vercel logs` for 24h, then gone. Zapier webhook also unwired. A production audit-bot lead just landed in logs and will be lost.

FIX Either (a) set up Vercel KV (1-click in dashboard, \$0 free tier covers 30K commands/mo), or (b) wire `ZAPIER_LEAD_WEBHOOK` to push into a Google Sheet. Take the path that matches how you plan to follow up.

6 · Arora Inbox · what was built vs what's next

Week 1 (this session — complete)

FILE	PURPOSE	LINES
<code>src/lib/google-gmail.ts</code>	OAuth helpers · token pack/unpack · HMAC-signed cookie · access-token refresh	~190
<code>src/app/api/agent/google/start/route.ts</code>	GET → redirects to Google consent screen with signed state	~25
<code>src/app/api/agent/google/callback/route.ts</code>	GET → exchanges code, persists tokens to httpOnly cookie	~65
<code>src/app/api/agent/google/disconnect/route.ts</code>	POST → clears cookie	~15
<code>src/app/api/agent/gmail/list/route.ts</code>	GET → returns 10 most-recent INBOX messages with From/Subject/snippet	~75
<code>src/app/inbox/page.tsx</code>	Server component · 3 states (not configured / not connected / connected)	~135

Week 2 (next session — designed, not built)

- **Classification** — every morning, label each thread {urgent, sales, vendor, social, internal, spam} via Anthropic Claude API. Requires `ANTHROPIC_API_KEY` on Vercel.
- **Draft generation** — for urgent + sales, generate a draft reply in the founder's voice. Requires ~20 of Srijan's past replies for tone-cloning (single-shot training prompt — no fine-tune).
- **Vercel Cron** — daily 7am UTC trigger per connected user via `vercel.json` + `/api/agent/cron/morning`.
- **Migrate token storage to Supabase** — current cookies have a 90-day TTL ceiling and don't survive cookie clearing. Supabase row-level encrypted at rest scales to 10 beta founders.
- **Beta seat gating** — only `aiprosol_session` users on the allowlist can connect. Today, anyone with a test-user Google account can theoretically connect (low risk — the OAuth client is still in Testing audience, capped to 100 users).

External dependencies for Week 2

Supabase project	PENDING	User task · free tier is fine for <10 founders
Anthropic API key	PENDING	User task · sonnet 3.5 for classification, opus 4 for drafting
10 beta founders	PENDING	User task · LinkedIn outreach to seed-stage founder network

7 · Nice to have · polish layer

7.1 · Homepage SSR payload (174 KB)

Notably larger than the next-biggest route (/about at 78 KB). Likely from inlined hero animations / 3D scene. Not a problem at current traffic; flag for after PostHog shows perceivable LCP degradation.

7.2 · Test lead in production logs

During this audit I POSTed a probe lead (`audit-bot@example.com`) which returned a 201. Since KV isn't configured it lives only in Vercel logs, but if/when you turn on KV, remember it's there.

7.3 · Edge runtime mismatch

`/api/arora-chat` uses `edge` runtime; new `/api/agent/*` routes use `nodejs`. Both correct (edge needed Web Crypto + fast streaming; node needed for Resend + node-style fetch headers). Just worth knowing for future routes.

7.4 · No TODO / FIXME comments in src/

Grep returned zero. Either we're disciplined or we forgot to leave breadcrumbs. Healthy signal either way.

8 · What I did NOT touch

- **Did not click "Allow" on the Google consent screen.** That's the moment you actively grant Gmail access — your tap, not mine. The screen is still open in your Chrome at tab "Sign in - Google Accounts".
- **Did not auto-apply any of the critical fixes** (sitemap entry, footer link, MX records). They are listed here for your call.
- **Did not retry the Complete Vault Gumroad listing.** Rate-limit reset is rolling 24h; safe to retry at any time today.
- **Did not commit any changes.** The new Arora Inbox files are deployed (via `vercel --prod`) but not yet in a git commit. `git status` on `/Users/user/Airprosol/web` will show them as untracked / modified.

9 · Recommended next 60 minutes

1. **Click "Allow" on the Google consent screen** (currently open). Confirms the round-trip works and gives you the first connected-as state on aiprosol.com/inbox.
2. **Push SESSION_SECRET to Vercel.** One-liner. Real security delta.
3. **Add /inbox to sitemap + footer link.** 5 min total. Makes the beta discoverable.
4. **ImprovMX for hello@aiprosol.com.** 3 min. Stops silent reply bounces.
5. **Commit today's work.** 6 new files, ~500 LOC, plus env var changes — wants a coherent `feat(arora-inbox): scaffold week 1 oauth + read` commit.
6. **Retry Complete Vault Gumroad creation** (rate-limit should be clear).

© 2026 Aiprosol Ltd · This report covers production state at 11 May 2026, 21:00 GMT+5 · Generated alongside Arora's Week 1 Inbox scaffold session · No customer data was read or transmitted during the audit.
